Storage Conditions

Shelf life 2 year. Store paper only in original boxes, out of direct sunlight and under normal climatic conditions (23 °C, 50% RH) until ready to use. Allow material to adapt to room conditions before use. Papers can absorb moisture in humid conditions or lose moisture in low humidity conditions. Highly humid conditions make the ink drying time longer and this could interfere with proper laminate adhesion.

Print Conditions

Best results are obtained between 15-25°C and 35-65% RH.
For optimum results select the best possible print settings - Operation Panel: Pro Platinum / Printer
Driver: Canon Photo Paper Pro Platinum.
Refer to printer specifications.

Environment, Health & Safety

No Material Safety Data Sheet required.

Lamination Compatibility

Cold	Warm	Hot	Cold: pressure sensitive Warm: heat activated: 85°C - 95°C Hot: heat activated: 105°C -130°C
no	no	no	

Outdoor Use

Photo Pro Platinum paper is not recommended for outdoor use.

Colour Profiles

Canon develops high-quality colour profiles for media / ink / printer / RIP combinations. Check availability of profiles for your printer on mediaguide.oce.com

Processing Guidelines

Printing guidelines

Allow material to adapt to room conditions for 24 hours before printing. It is recommended to handle the media with cotton gloves. Make sure that the media does not come into contact with grease, oil, silicon, and dirt to avoid printing defects.

Load the media with care in the printers. Incorrect loading can cause skewing or creasing. Use a take-up device to prevent wrinkling.

It is recommended to calibrate the printer before printing and to make a test print. Print results will vary for different printer/ink combinations.

Canon Colour profiles include recommended settings for ink restrictions and printer parameters. Depending on fluctuations in environment, printer, ink, media and applications, printer parameters may have to be adjusted slightly, in order to obtain the best results.

For high-speed production printing, using an external drying unit is recommended.

Application

Professional studio finish photo paper offering outstanding quality and fade resistance. With wide colour reproduction, this glossy heavyweight paper extends the creative potential of photographers. Professional photographers need ultimate gloss surface paper to show their work to its best advantage, and Canon has the paper that won't look out of place in any gallery - Photo Paper Pro Platinum. With high optical density thanks to its six-layer construction, optimum studio results can be achieved.

Canon glossy paper locks the ink deep below the top glossy surface unlike other papers. This way the 'glossy' finish is always glossy. Genuine Canon photo papers have a micro-porous coating that quickly absorbs ink deep below the surface to prevent any excess ink from being left on the paper's surface. The result: instant-dry photo prints.

Pro Platinum photo paper is an excellent match for Canon Lucia Pro inks. Combining Canon's FINE print head technology, inks and Canon genuine photo paper protect photos from gases and light to keep those precious memories protected for future generations.
